

Stress Combination and their Interaction in Plants (SCIP) Database

Website link: <http://www.nipgr.res.in/scipdb.php>

Effect on wheat cultivars (*Triticum aestivum* L.)

The net impact of individual and combined stress on the plant

Stress 1: <i>Cochliobolus sativus</i>
Stress 2: <i>Pyrenophora tritici-repentis</i>
Stage of plant: Main shoot and 3 tillers

The table shows the impact of individual and combined stress on yield loss

Cultivar	Treatment	Response under combined stress (Type A parameter*)
		Reduction over control (%)
		Yield
Candiota	<i>C. sativus</i> + <i>P. tritici-repentis</i> (50:50 inoculum at 10^4 conidia/mL) (Simultaneous stress)	20.16
	<i>C. sativus</i> (100% inoculum at 10^4 conidia/mL)	40.07
	<i>P. tritici-repentis</i> (100% inoculum at 10^4 conidia/mL)	20.22

Note: Values presented in the table were calculated using the formula described below.

$$\text{Reduction over control (\%)} = \frac{(\text{Value Control} - \text{Value Stress})}{\text{Value Control}} \times 100$$

1) - indicates plant parameter is more affected by stress that leads to high susceptibility (higher the value more the damage).

* - For more information on parameters classification, please refer to 'methodology' tab

B. The interaction between the fungal pathogens under combined stress at plant interface

The table shows the interaction between fungus *C. sativus* and *P. tritici-repentis* in wheat cultivars in relation to the germination, appressorium formation, germ tube formation, fungal re-isolation, incubation period and disease lesion formed by the pathogen

Effect of sequential inoculations on leaves after 7- and 14-days incubation			
Cultivar	Treatment	Response under combined stress (Type B parameters*)	
		Disease symptoms (%)	
		7 days	14 days
Candiota	<i>C. sativus</i> (10^4 conidia/mL) + 7 days interval + <i>C. sativus</i> (10^4 conidia/mL) (Sequential stress)	66.5	91
	<i>P. tritici-repentis</i> (10^4 conidia/mL) + 7 days interval + <i>P. tritici-repentis</i> (10^4 conidia/mL) (Sequential)	36.5	76.2

	stress)		
	<i>P. tritici-repentis</i> (10^4 conidia/mL) + 7 days interval + <i>C. sativus</i> (10^4 conidia/mL) (Sequential stress)	34	80.2
	<i>C. sativus</i> (10^4 conidia/mL) + 7 days interval + <i>P. tritici-repentis</i> (10^4 conidia/mL) (Sequential stress)	68.3	72.3
BR8	<i>C. sativus</i> (10^4 conidia/mL) + 7 days interval + <i>C. sativus</i> (10^4 conidia/mL) (Sequential stress)	45	75.1
	<i>P. tritici-repentis</i> (10^4 conidia/mL) + 7 days interval + <i>P. tritici-repentis</i> (10^4 conidia/mL) (Sequential stress)	24.8	55.9
	<i>P. tritici-repentis</i> (10^4 conidia/mL) + 7 days interval + <i>C. sativus</i> (10^4 conidia/mL) (Sequential stress)	24.2	73.4
	<i>C. sativus</i> (10^4 conidia/mL) + 7 days interval + <i>P. tritici-repentis</i> (10^4 conidia/mL) (Sequential stress)	46.7	50.2
Max	<i>C. sativus</i> (10^4 conidia/mL) + 7 days interval + <i>C. sativus</i> (10^4 conidia/mL) (Sequential stress)	69	86.4
	<i>P. tritici-repentis</i> (10^4 conidia/mL) + 7 days interval + <i>P. tritici-repentis</i> (10^4 conidia/mL) (Sequential stress)	42	91
	<i>P. tritici-repentis</i> (10^4 conidia/mL) + 7 days interval + <i>C. sativus</i> (10^4 conidia/mL) (Sequential stress)	44.8	92.1
	<i>C. sativus</i> (10^4 conidia/mL) + 7 days interval + <i>P. tritici-repentis</i> (10^4 conidia/mL) (Sequential stress)	68.7	84.2
BH1146	<i>C. sativus</i> (10^4 conidia/mL) + 7 days interval + <i>C. sativus</i> (10^4 conidia/mL) (Sequential stress)	50.2	78
	<i>P. tritici-repentis</i> (10^4 conidia/mL) + 7 days interval + <i>P. tritici-repentis</i> (10^4 conidia/mL) (Sequential stress)	13.8	46.4
	<i>P. tritici-repentis</i> (10^4 conidia/mL) + 7 days interval + <i>C. sativus</i> (10^4 conidia/mL) (Sequential stress)	14.1	72.6
	<i>C. sativus</i> (10^4 conidia/mL) + 7 days interval + <i>P. tritici-repentis</i> (10^4 conidia/mL) (Sequential stress)	48.7	54

Effect of simultaneous and single inoculations on leaves after 7 days incubation

Cultivar	Treatment	Disease symptoms on leaf (%)
Candiota	<i>C. sativus</i> + <i>P. tritici-repentis</i> (50:50 inoculum at 10^4 conidia/mL) (Simultaneous stress)	43.42
	<i>C. sativus</i> + <i>P. tritici-repentis</i> (20:80 inoculum at 10^4 conidia/mL) (Simultaneous stress)	24.96
	<i>C. sativus</i> + <i>P. tritici-repentis</i> (80:20 inoculum at 10^4 conidia/mL) (Simultaneous stress)	64.72
	<i>C. sativus</i> (100% inoculum at 10^4 conidia/mL)	72.27
	<i>P. tritici-repentis</i> (100% inoculum at 10^4 conidia/mL)	37.69
BR8	<i>C. sativus</i> + <i>P. tritici-repentis</i> (50:50 inoculum at 10^4 conidia/mL) (Simultaneous stress)	32.69
	<i>C. sativus</i> + <i>P. tritici-repentis</i> (20:80 inoculum at 10^4 conidia/mL) (Simultaneous stress)	20.33
	<i>C. sativus</i> + <i>P. tritici-repentis</i> (80:20 inoculum at 10^4 conidia/mL) (Simultaneous stress)	42.94
	<i>C. sativus</i> (100% inoculum at 10^4 conidia/mL)	50.49
	<i>P. tritici-repentis</i> (100% inoculum at 10^4 conidia/mL)	26.37

Max	<i>C. sativus</i> + <i>P. tritici-repentis</i> (50:50 inoculum at 10^4 conidia/mL) (Simultaneous stress)	49.11
	<i>C. sativus</i> + <i>P. tritici-repentis</i> (20:80 inoculum at 10^4 conidia/mL) (Simultaneous stress)	27.67
	<i>C. sativus</i> + <i>P. tritici-repentis</i> (80:20 inoculum at 10^4 conidia/mL) (Simultaneous stress)	65.68
	<i>C. sativus</i> (100% inoculum at 10^4 conidia/mL)	76.17
	<i>P. tritici-repentis</i> (100% inoculum at 10^4 conidia/mL)	45.48
BH1146	<i>C. sativus</i> + <i>P. tritici-repentis</i> (50:50 inoculum at 10^4 conidia/mL) (Simultaneous stress)	26.73
	<i>C. sativus</i> + <i>P. tritici-repentis</i> (20:80 inoculum at 10^4 conidia/mL) (Simultaneous stress)	16.03
	<i>C. sativus</i> + <i>P. tritici-repentis</i> (80:20 inoculum at 10^4 conidia/mL) (Simultaneous stress)	45.33
	<i>C. sativus</i> (100% inoculum at 10^4 conidia/mL)	58.27
	<i>P. tritici-repentis</i> (100% inoculum at 10^4 conidia/mL)	14.74

Effect of simultaneous and single inoculations on the incubation period and pathogen parameters

Cultivar	Treatment	Effect on incubation period		Conidium germination (%)		Germ tube length (mm)		Appressorium formation (%)	
		C.s.	P.t.r.	C.s.	P.t.r.	C.s.	P.t.r.	C.s.	P.t.r.
Candiota	<i>C. sativus</i> + <i>P. tritici-repentis</i> (50:50 inoculum at 10^4 conidia/mL) (Simultaneous stress)	25.73	43.85	83	67	244	53	44	31

Reference- da Luz WC, Bergstrom GC (1987) Interactions between *Cochliobolus sativus* and *Pyrenophora tritici-repentis* on wheat leaves. *Phytopath.* **77**:1355-1360

Note: Values are presented as it is from the source article without subjecting to the calculation.

“*”- For more information on parameters classification, please refer to ‘methodology’ tab

The inference from the study: Luz and Bergstrom, 1987, have studied the interaction between the two pathogens *C. sativus* (causal agent of spot blotch) and *P. tritici-repentis* (causal agent of tan spot) on four wheat cultivars Candiota, BR8, Max and BH1146. The combined treatments performed on all the cultivars showed the inhibitory effect of both the pathogens towards each other in comparison with the single inoculation of either pathogen. Hence the overall observation leads to conclude the antagonistic/competitive nature among both the pathogens.
